

PS-FL770

SERVICE MANUAL

*US Model
Canadian Model
AEP Model
E Model*

SPECIFICATIONS

Turntable

Platter	28 cm (11 in.), aluminum-alloy diecast
Motor	Linear torque BSL (brushless and slotless) motor
Drive system	Direct drive
Control system	FG servo control system
Speed	33 $\frac{1}{3}$ rpm, 45 rpm
Wow and flutter	0.03% (WRMS)*, 0.035% (WRMS) $\pm 0.045\%$ (DIN)
Signal-to-noise ratio	75 dB (DIN-B)
Automatic system	Lead-in, return, reject, repeat, record size selection

SAFETY-RELATED COMPONENT WARNING!!

COMPONENTS IDENTIFIED BY SHADING AND MARK  ON THE SCHEMATIC DIAGRAMS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

ATTENTION AU COMPOSANT AYANT RAPPORT À LA SÉCURITÉ!

LES COMPOSANTS IDENTIFIÉS PAR UNE TRAME ET UNE MARQUE  SUR LES DIAGRAMMES SCHÉMATIQUES ET LA LISTE DES PIÈCES SONT CRITIQUES POUR LA SÉCURITÉ DE FONCTIONNEMENT. NE REMPLACER CES COMPOSANTS QUE PAR DES PIÈCES SONY DONT LES NUMÉROS SONT DONNÉS DANS CE MANUEL OU DANS LES SUPPLÉMENTS PUBLIÉS PAR SONY.

Tonearm

Type	Electronic tonearm, linear tracking
Pivot-to-stylus length	75 mm (3 in.)
Overall arm length	170 mm (6 $\frac{3}{4}$ in.)
Tracking error	$\pm 0.1^\circ$
Tracking force adjustment range	1.25 \pm 0.25 g
Cartridge	plug-in type, 6 g

Cartridge (XL-300G for AEP, E model, VL-45G for certain US, Canadian model)

Type	Moving magnet type
Frequency response	20 Hz to 20 kHz
Channel separation	AEP, E model: 23 dB at 1 kHz US, Canadian model: 20 dB at 1 kHz
Output voltage	AEP, E model: 3 mV at 1 kHz, 5 cm/sec., 45° US, Canadian model: 3.5 mV at 1 kHz, 5 cm/sec., 45°
Load impedance	47 kilohms
Tracking force	1.25 g
Stylus	AEP, E model: Sony ND-300G US, Canadian model: Sony ND-145G
Weight	6 g

— Continued on page 2 —

STEREO TURNTABLE SYSTEM

SONY®

AUD

General

Power requirements	AEP model: 220 V ac, 50/60 Hz US, Canadian model: 120 V ac, 60 Hz E model: 110 — 120 or 220 — 240 V ac adjustable 50/60 Hz
Power consumption	15 W
Dimensions	Approx. 355(w) x 90(h) x 400(d) mm (14 x 3½ x 15¾ in.) including projecting parts and controls (For the dimensions with the module opened, see illustration below.)

Weight	Approx. 7.0 kg (15 lbs 7 oz), net Approx. 8.2 kg (18 lbs 2 oz), in shipping carton
--------	---

Note

This appliance conforms with EEC Directives 76/889 and 82/499 regarding interference suppression.

* This new measuring method concerns only the turntable assembly, including the platter. It excludes wow and flutter caused by the tonearm, the cartridge, or the record. Measured by obtaining signal from magnetic pick-up head.

FEATURES

● Unique modular turntable system

Other audio components (max. 35 kg) can be positioned on top of the turntable cabinet.

● RMS (Random Music Sensor)

The RMS allows you to play the selections on one side of the record in a desired sequence.

● Synchronized operation with the Sony tape decks

The synchronized operation is possible with Sony cassette decks equipped with a synchro remote control connector.

● Wireless remote control operation

With the optional ST-V77/V77L system control tuner, the total audio system can be remotely controlled.

● Direct function

● Servo-controlled linear tracking tonearm

● A microprocessor which controls four motors

● Fully automatic system

● Muting system

● Liner torque BSL motor

SAFETY CHECK-OUT (US Model)

After correcting the original service problem, perform the following safety check before releasing the set to the customer:

Check the antenna terminals, metal trim, "metallized" knobs, screws, and all other exposed metal parts for AC leakage. Check leakage as described below.

LEAKAGE TEST

The AC leakage from any exposed metal part to earth ground and from all exposed metal parts to any exposed metal part having a return to chassis, must not exceed 0.5 mA (500 microamperes). Leakage current can be measured by any one of three methods.

1. A commercial leakage tester, such as the Simpson 229 or RCA WT-540A. Follow the manufacturers' instructions to use these instruments.
2. A battery-operated AC milliammeter. The Data Precision 245 digital multimeter is suitable for this job.
3. Measuring the voltage drop across a resistor by means of a VOM or battery-operated AC voltmeter. The "limit" indication is 0.75 V, so analog meters must have an accurate low-voltage scale. The Simpson 250 and Sanwa SH-63Trd are examples of a passive VOM that is suitable. Nearly all battery operated digital multimeters that have a 2 V AC range are suitable. (See Fig. A)

Fig. A. Using an AC voltmeter to check AC leakage.

MODEL IDENTIFICATION

— Specification Label —

US, Canadian model: AC: 120 V ~ 60 Hz 15 W
AEP, G-AEP model: AC: 220 V ~ 50/60 Hz 15 W
E model: AC: 110 - 120 V, 220 - 240 V ~ 50/60 Hz 15 W

FUNCTION OF CONTROLS

❶ Power switch

❷ Platter

❸ Rubber mat

❹ Photo detector

Detects the record size (30 cm, 25 cm and 17 cm) and how many selections are on a record, by searching for blank spaces between selections when the module closes.

❺ Center spindle

❻ Tonearm position indicator

❼ Tonearm

❽ Cartridge locking screw

❾ Cartridge

❿ Display window

The number of the selection being played, the programmed selections for RMS play, etc. are displayed in this window.

⓫ RMS programming keys and CLEAR key

Used for programming the selections to be played in the desired sequence. Press the CLEAR key to cancel the program.

⓬ SKIP key

Press this key to skip a selection during play. This key is also used for AMS (Automatic Music Sensor) play.

⓭ SPEED selector and indicators

Press this key when a 45 rpm record is to be played. Press it again for a 33 $\frac{1}{3}$ rpm record. Corresponding indicator illuminates.

⓮ REPEAT key and indicator

Press this key to repeat play. The indicator illuminates. To cancel the repeat play, press this key again. You can also use this key to repeat the selections programmed by the RMS function.

⓯ ARM TRANSPORT keys

To move the tonearm inward, press the \triangleleft key, and to move outward, the \triangleright key.

⓰ ∇/∇ ARM LIFTER key

This key lifts and lowers the tonearm. When the tonearm is lowered, the turntable starts rotating. This key does not function when the tonearm is in the arm rest position.

⓱ START/STOP key and indicator

Press to start the record playing. The play indicator illuminates. To stop during play, press it again.

18 OPEN/CLOSE key

With one touch of this key the turntable module automatically opens for loading a record. With another touch the module automatically closes.

19 SENSITIVITY selector

Normally set this selector to M. When the number of the selections detected is not correct, set the selector to either H or L.

20 DP ADJUST (drop-point adjustment) opening**Rear panel****21 SYNC connector**

Connect to the synchro connector of the Sony cassette deck for synchronized recording.

22 CONTROL S connector

Use this connector for total audio system remote control. For details, refer to the Operating Instructions of the optional Sony ST-V77/V77L system control tuner.

23 CONTROL S connector

Use this connector for total audio system remote control. For details, refer to the Operating Instructions of the optional Sony ST-V77/V77L system control tuner.

24 FUNCTION CONTROL connector

Connect this connector to the PHONO direct function connector of the optional ST-V77/V77L system control tuner for direct function.

TRACKING FORCE FINE ADJUSTMENT

The tracking force has been correctly adjusted at the factory. Make fine adjustment only when the tracking force is so light that the stylus skips grooves.

- 1 Depress the power switch (ON), then press the OPEN/CLOSE key to open the module.
- 2 Press the  ARM TRANSPORT key to move the tonearm toward the center spindle.
- 3 Slide the tracking force adjustment lever. Be sure that the stylus guard is installed.

Slide the tracking force adjustment lever towards + (forward) for heavier tracking force or towards - (backward) for lighter tracking force

- 4 Press the  ARM TRANSPORT key to move the tonearm to the arm rest position.

TONEARM DROP-POINT ADJUSTMENT

The tonearm's drop-point during auto play, AMS play or RMS play has been adjusted at the factory. Adjust this if the stylus does not lower correctly at the beginning of the desired selection.

- 1 Press the OPEN/CLOSE key to open the module.
- 2 Insert the supplied screwdriver into the DP ADJUST opening.
To move the drop-point inward, turn the screw counterclockwise (towards IN).
To move the drop-point outward, turn the screw clockwise (towards OUT). Do not turn it so far clockwise that the stylus tip cannot make contact with the record.

- 3 Check if the drop-point is correctly adjusted by lowering the tonearm to the beginning of a selection in the middle of the record, using the AMS function. (Checking the drop-point for the first selection is not sufficiently accurate.)

If the drop-point is correct for one selection, it will also be correct for all the selections.

RECORD PLAYING

AUTO PLAY

—To begin record play from the beginning of the record

This turntable's photo detector detects the record size: 30 cm (12 inch), 25 cm (10 inch) or 17 cm (7 inch), and the number of the selections on the record **when the module closes**. Therefore **after turning the power on, be sure to press the OPEN/CLOSE key to open the module completely** so that the detector is on standby.

Follow the numbered sequence.

- 1 Turn on the amplifier, lower the amplifier volume and set the input selector to PHONO.
- 2 Depress the power switch (ON).
- 3 Press the OPEN/CLOSE key to open the module.
- 4 Place a record on the platter. For 45 rpm record playing, see below.
- 5 Remove the stylus guard.
- 6 Press the START/STOP key. Play will begin.

When the tonearm reaches the end of the record, it will automatically return to the arm rest position. Turn off the power switch after the tonearm returns to the arm rest position.

45 rpm record playing

- Put the supplied 45 rpm adaptor over the center spindle and place a record on the platter.
- Press the SPEED selector so that the 45 indicator illuminates.

Notes

- If the power switch is turned off while the tonearm is returning to the arm rest position, when you press the power switch the next time the tonearm will return to the arm rest position. While the tonearm is moving, the START/STOP key is not activated.

RMS (RANDOM MUSIC SENSOR) PLAY

You can play selections on one side of the record in the desired sequence, which has been programmed using the RMS key.

- 1 Press the OPEN/CLOSE key to open the module, put on a record and select the record speed.
- 2 Press the RMS keys in the sequence in which you want to listen to the selections. Each time the RMS key is pressed, the selected number is displayed once in the right position in the display window, immediately moves to the left position, and the cursor blinks in the right position to indicate another selection can be programmed. Up to 15 selections can be programmed.

To change the program, press the CLEAR key and input the selections again.

- 3 Press the START/STOP key. The module closes and play begins from the first-programmed selection. The RMS indicator lights during RMS play.

At the end of the last-programmed selection, the tonearm will return to the arm rest position automatically. If you wish to play the same selections in the same sequence again, press the START/STOP key.

To change the programmed sequence

Press the CLEAR key when the tonearm is on the arm rest position. The display will change to 00 and the programmed sequence will be erased. Then press the RMS keys again in the desired sequence.

Automatic editing function of the RMS program

If a selection number which does not exist on the record is selected with the module open, that number will be erased automatically when the module closes. For example, if you have pressed the 6, 2, 8, 5 and 7 RMS keys in that order, for a record containing only 6 selections, numbers 8 and 7 will be erased when the module closes and the 6th, 2nd and 5th selections will be played.

If an incorrect RMS key is pressed with the module closed, the number of the key will not be displayed. This is an automatic editing function of the RMS program.

If the pressed RMS keys are all incorrect, the "E" (error) indicator will flash several times, or the display will not change from 00.

To cancel the RMS program

Press the ARM TRANSPORT keys or the OPEN/CLOSE key during play, or press the CLEAR key when the tonearm is in the arm rest position. The display will change to 00 when the tonearm is in arm rest position and the programmed sequence will be erased.

TO LIFT UP THE STYLUS DURING RMS PLAY

To lift up the stylus for a moment and then start playing from the same point, press the ARM LIFTER key. To lower the tonearm onto the record, press the ARM LIFTER key again.

TO STOP DURING RMS PLAY

Press the START/STOP key. The tonearm will return to the arm rest position. When the START/STOP key is pressed again, the RMS play will restart from the beginning.

TO SKIP SELECTIONS DURING RMS PLAY

Press the SKIP key during play. Each time the SKIP key is pressed, the next selection ahead is played.

TO REPEAT RMS PLAY IN THE PROGRAMMED SEQUENCE

Press the REPEAT key either before or after starting RMS play. At the end of the last-programmed selection, the tonearm will return to the first-programmed selection automatically, then play will restart.

To stop during repeat play, press the REPEAT key. When the last-programmed selection has been played, the tonearm will return to the arm rest position and repeat function will be cancelled.

If you press the START/STOP key during repeat play, play will stop immediately, the tonearm will return to the arm rest position and the repeat function will be cancelled.

AMS (AUTOMATIC MUSIC SENSOR) PLAY

—To begin record play from the desired selection

- 1 Press the OPEN/CLOSE key to open the module, put on a record and select the correct record speed.
- 2 Press the SKIP key repeatedly until the number of the selection from which you want to start play is displayed.

Each time the SKIP key is pressed, the number of the selection displayed increases by one, up to 15, then returns to 01.

- 3 Press the START/STOP key. The module closes, the tonearm searches for the preset selection and play begins.

Note

If the selection number which does not exist (for example, "08" for a record which contains only 7 selections) is input with the module opened, the "E" (error) indicator appears and flashes several times, then "00" is displayed. In this case, input an appropriate selection number.

TO SKIP TO THE DESIRED SELECTION DURING PLAY

—Using the SKIP function

Press the SKIP key repeatedly during play until the number of the desired selection is displayed. Each time the SKIP key is pressed, the next selection in advance is displayed, and when the last selection has been selected, the display reverts to 01.

The tonearm will lift up, search for the preset selection and play will start automatically.

Note

The SKIP function is inoperative while the tonearm is in the raised position or while the record is being played with the module open.

Error indicator

The "E" (error) indicator flashes several times and the display will change to 00 in the following cases.

- When the START/STOP key is pressed, but there is no record on the platter.
- When inappropriate selection numbers are set for AMS or RMS play with the module open, and the START/STOP key is pressed.
- When the OPEN/CLOSE key is pressed while the module is closing and the same button is pressed again before the module has opened completely, then the START/STOP key is pressed.

AUTO RECORD SIZE SELECTION SYSTEM

When the module closes, the photo detector searches over the record to detect the record size (30 cm, 25 cm or 17 cm) and sense how many selections are on the record, by detecting the blank spaces between selections. The selection number indicator changes rapidly from 01 to the number of the selection contained on the record. Up to 15 selections can be counted. The data is input into the memory of the microcomputer incorporated. This data will be erased from the memory when the OPEN/CLOSE key is pressed to open the module.

Note

If the OPEN/CLOSE key is pressed while the module is closing and the same key is pressed again before the module has opened completely, the record size and selections will not be detected and the "E" (error) indicator will flash several times when the START/STOP key is pressed later.

In this case, press the OPEN/CLOSE key to open the module completely and press it again to close the module.

SENSITIVITY selector

Since the photo detector searches for the blank spaces on a record, it cannot operate correctly if the blank spaces and music grooves are not in good condition. As a result, the RMS, AMS and skip functions may malfunction.

If the number of the selections detected is different from the number of the selections actually existing, change the position of the SENSITIVITY selector to either H (high) or L (low).

Why too few selections are detected :

In this case, change the SENSITIVITY selector setting to H.

Why too many selections are detected :

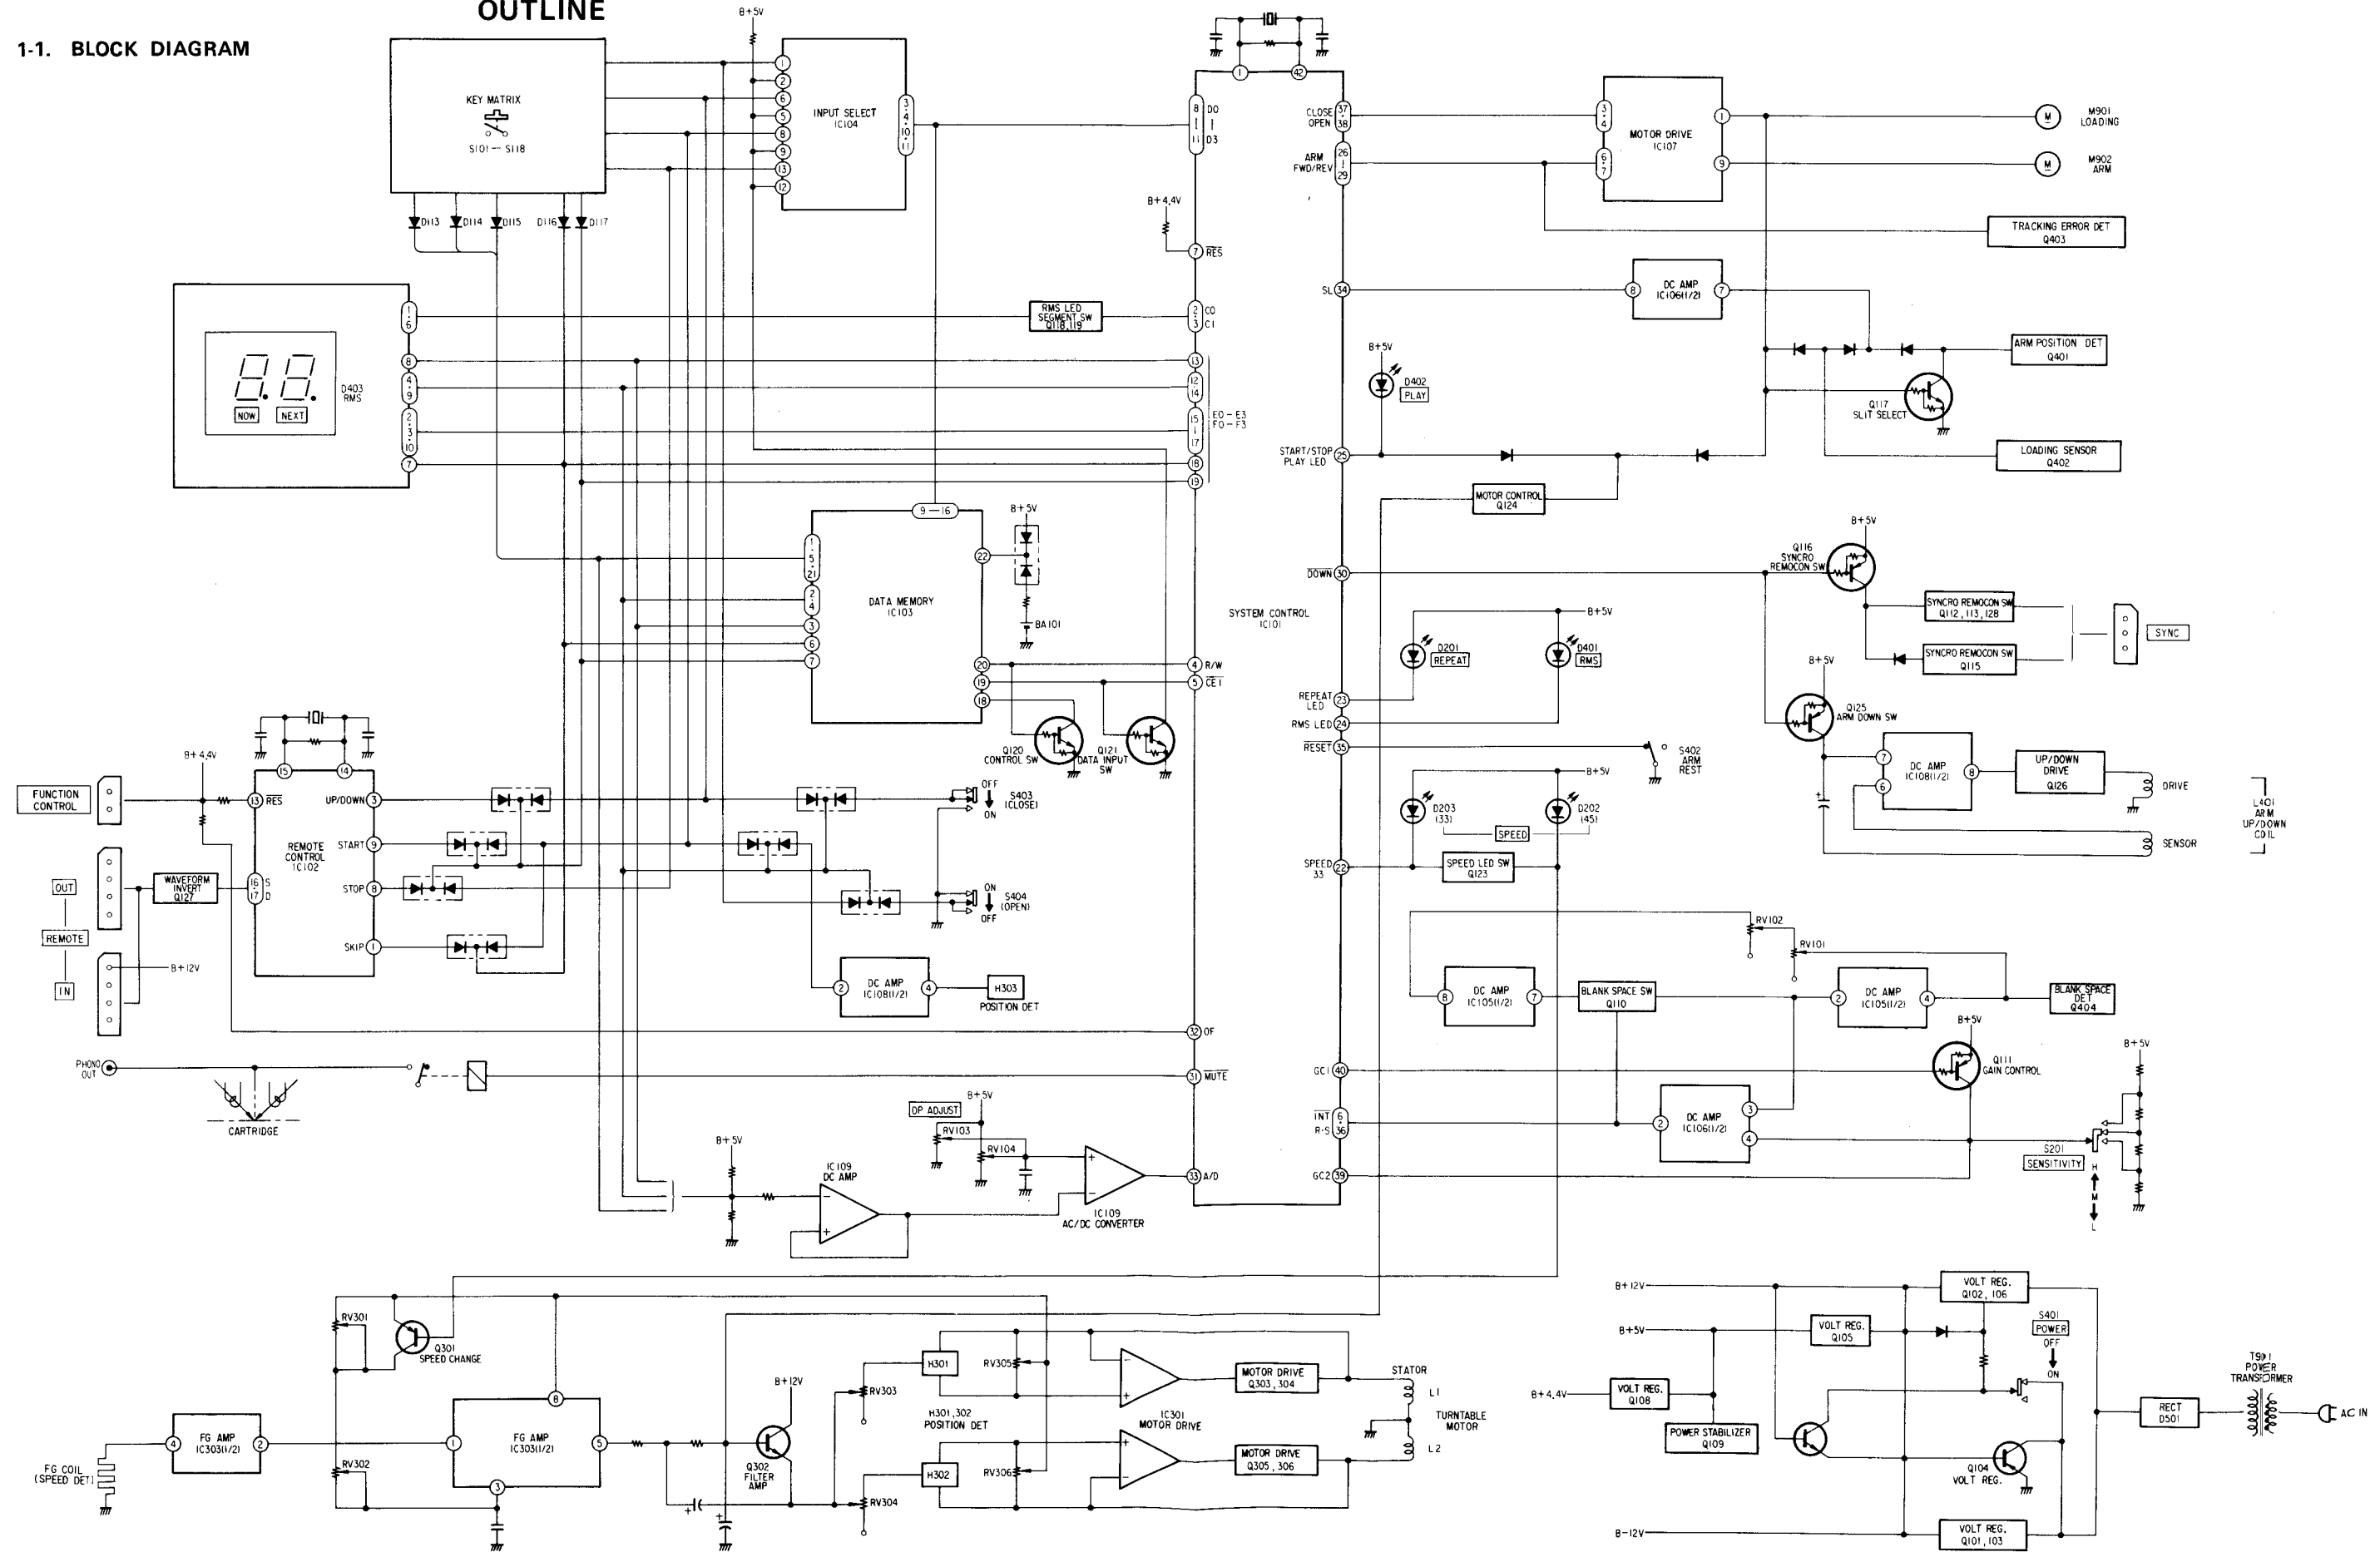

In this case, change the SENSITIVITY selector setting to L.

The presence and size of the special records, such as transparent, non-standardized, unusual shape or color (red, yellow, etc.) records, can be detected. However, the blank spaces sometimes cannot be searched, resulting in inferior RMS or AMS operation. Play these records manually, referring to "Manual play".

SECTION 1 OUTLINE

1-1. BLOCK DIAGRAM

SECTION 2 DISASSEMBLY

2-1. REMOVAL

Note: Follow the disassembly procedure in the numerical order given.

FRAME COVER (B)

BOTTOM PLATE

LOADING MOTOR (M901)

ARM MOTOR (M902)

Remove top plate (see page 11).

TONEARM

① Remove the wire stopper.

2-2. TONEARM ASSEMBLING

TONEARM ASSEMBLING (1)

TONARM ASSEMBLING (2)

TONEARM ASSEMBLING (3)

TONEARM ASSEMBLING (4)

2.2. ARM DRIVE CORD STRINGING

1) Preparation

2) Stringing

SECTION 3 ADJUSTMENTS

3-1. MECHANICAL ADJUSTMENTS

Note: Follow the adjustment procedure in the order given.

Stylus Height Adjustment

1. Put a record.
2. Press ARM TRANSPORT button (←) and move the arm inside the record groove.
3. Make sure that clearance (A) is 3 – 8 mm ($\frac{1}{8}$ – $\frac{5}{16}$ inches). If necessary, adjust the stylus height adjustment screw.
4. Press ARM TREATMENT button (→) and move the arm outside the record groove.
5. Make sure that the difference of height between step 3 and step 4 is within 2.5 mm ($\frac{1}{8}$ ").

Drop Point (30 cm) Adjustment

1. Place a test record (YFSC-16) on the turntable and press the START/STOP button for lead-in.
2. Adjust the L position adjustment cam so that the drop point at this time is within the specification. Specification: 7 – 19 counts.

3. When the adjustment cannot be made by L position adjustment cam, adjust by using horizontal position adjustment screw.

Lifter Height Adjustment

1. Adjust the lifter height adjustment screw so that the arm up/down coil position is 0 – 0.5 mm ($0'' - \frac{1}{32}''$) as shown below.
2. Apply locking compound to the screw.

Tracking Error Adjustment

1. Place a test record (YFSC-16) on the turntable and press the START/STOP button for lead-in.
2. Turn the adjustment screw so that the tonearm base does not move just after the tonearm goes down.
3. After completing step (2), cause the tonearm to lead in, and then go UP after the tonearm base moves.

4. Check the count at this time, and then check that the difference in count when the tonearm goes down again is within 0 to 2 counts.

3-2. ELECTRICAL ADJUSTMENTS

Blank Space Sensor Adjustment

This adjustment should be performed only when the followings have been done.

- When assembling blank space sensor section:
- When replacing photo coupler (Q404) of blank space sensor:

1. Blank Space Sensor Inclination Adjustment

- (1) Place the lacquer record (no groove record) on the turntable.
- (2) Move the turntable module so that the turntable position is as shown in the figure below.

- (3) Adjust the adjustment screw so that the VOM reading is maximum in minus range.

- (4) Turn the adjustment screw a half turn clockwise.
- (5) Apply locking compound.

— Simple Adjustment —

- 1) Adjust the adjustment screw so that the blank space sensor is horizontal.

- 2) Apply locking compound.

2. Blank Space Sensor Voltage Adjustment

- (1) Place the lacquer record (no groove record) on the turntable.
- (2) Move the turntable module so that the turntable position is as shown in the step 1-(2).
- (3) Adjust the RV101 or RV102 so that VOM reading is -1 to -0.95 V dc.

— Simple Adjustment —

- 1) Place the test record (YFSC-16) on the turntable.
- 2) Press the OPEN/CLOSE button and close the turntable module.
- 3) Adjust the RV101 or RV102 so that the indication on the display at this time within the specification.

Note: This adjustment should be performed for both A side and B side of the test record (YFSC-16).

Specifications:

side A: 6 – 7

side B: 13 – 14

Adjustment Location and VOM Connecting Point:

— system control board —

RV101 RV102

Arm Interrupter Adjustment

This adjustment should be performed only when replacing photo interrupter (Q401).

1. Press the arm transport button (◀) and move the arm over the turntable.
2. Press the arm lifter button and down the arm.
3. Set the arm fully rightward.
(Be sure that the interrupter for tracking error detection is fully opened.)
4. Read the voltage on the VOM.

If the reading is more than 0.6 V, short the TP106.

Adjustment Location:

—system control board—

Blank Space Drop Point Adjustment

1. Set the RV301 (drop point adjustment resistor for user) to mechanical center.
2. Set the SENSITIVITY switch to "M".
3. Place the any one record on the turntable.
4. Press the OPEN/CLOSE button and close the turntable module.
5. Press the RMS button and play the second selection and last selection.

At this time, confirm that the stylus tip drops on the blank space.

If it is not, adjust RV104 and repeat steps 4 and 6.

Adjustment Location:

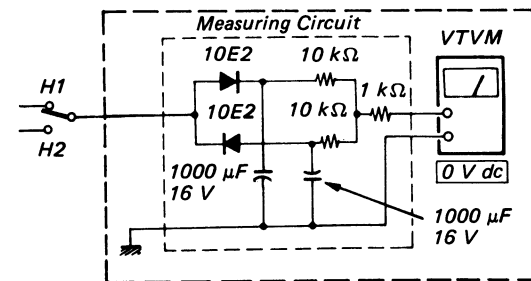

—system control board—

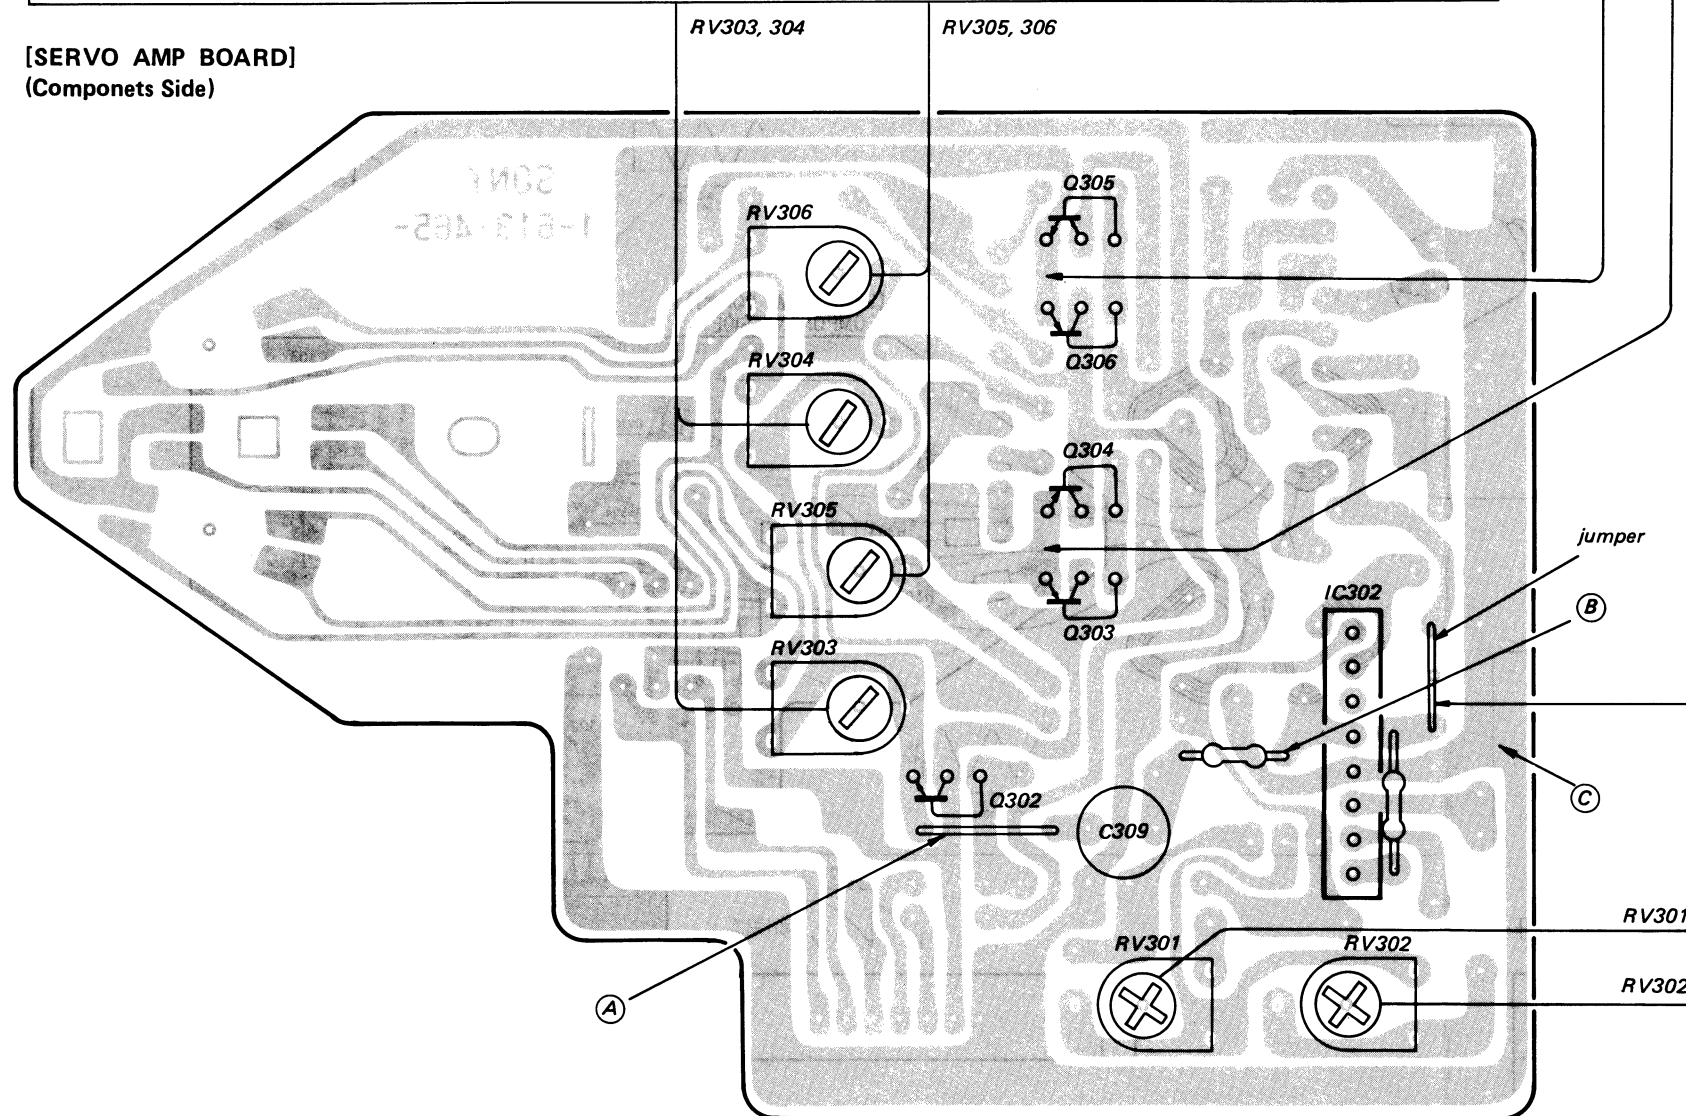

RV104 RV103

Gain/Offset Adjustment

1. Connect the pattern (B) to (C), and apply regulated power supply (1.5 V DC) to point (A).
2. Connect an oscilloscope to the emitter of Q303, Q304 (H1), Q305, Q306 (H2), and adjust the regulated power supply voltage for 1.5 V DC.
3. Adjust RV303 (H1) and RV304 (H2) so that the terminal voltage of Q303, Q304 (H1) and Q305, Q306 (H2) are 4.5 Vp-p **Gain Adjustment**
4. Adjust RV305 (H1) and RV306 (H2) so that the terminal waveforms of Q303, Q304 (H1) and Q305, Q306 (H2) are as shown below (or so that DC potential is 0 V) **Offset Adjustment**
5. After Adjustment, remove the lead wire connecting pattern (B) to (C).

[SERVO AMP BOARD]
(Components Side)

Speed Adjustment

1. Set power switch to "ON".
2. Set turntable speed to "45 rpm".
3. Adjust RV301 for 95.72 – 96.26 Hz reading on the counter.
4. Set turntable speed to "33 rpm".
5. Adjust RV302 for 70.90 – 71.32 Hz reading on the counter.

SECTION 5

EXPLODED VIEWS AND PARTS LIST

NOTE:

- The mechanical parts with no reference number in the exploded views are not supplied.
- Items marked " ★ " are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- The construction parts of an assembled part are indicated with a collation number on the remark column.

The components identified by shading and mark  are critical for safety. Replace only with part number specified.

Les composants identifiés par une trame et une marque  sont critiques pour la sécurité. Ne les remplacer que par une pièce portant le numéro spécifié.

ELECTRICAL PARTS LIST

NOTE:

Items marked " ★ " are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.

If there are two or more same circuits in a set such as a stereophonic machine, only typical circuit parts may be indicated and capacitors and resistors in other same circuits may be omitted.

CAPACITORS:

MF: μ F, PF: μ F.

RESISTORS

All resistors are in ohms.

F : nonflammable

COILS

MMH : mH, UH : μ H

SEMICONDUCTORS

In each case, U : μ , for example:

UA....: μ A..., UPA....: μ PA..., UPC....: μ PC,

UPD....: μ PD...

The components identified by shading and mark **A** are critical for safety. Replace only with part number specified.

Les composants identifiés par une trame et une marque **A** sont critiques pour la sécurité. Ne les remplacer que par une pièce portant le numéro spécifié.
